## DETAILED ACTION

### Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### Drawings

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference characters not mentioned in the description: 80,82,84. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference characters in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2629

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Chiang Shiung-Fei (U.S. Patent No. 4,895,376, hereinafter CHIANG).

As to independent Claims 1 and 5, CHIANG teaches/suggests a computer system in Figures 1-8b comprising:

a mainframe providing a video signal (see Figures 8a,b); and

an interface apparatus (10) electrically connected to the mainframe, the interface apparatus comprising:

a base (12);

a receiving circuit for receiving the video signal (see Figures 8a,b);

a display panel (50) for transforming the video signal into an image and displaying the image (see Figures 8a,b);

a shaft (30) connected to the display panel and movably disposed on the base; and

a detecting module for detecting a movement of the shaft relative to the base and outputting a detecting signal (see Figures 8a,b);

wherein when the shaft is moved, the shaft simultaneously moves the display panel, and the detecting module outputs the detecting signal to the mainframe (CHIANG: col. 3, ln. 54 – col. 4, ln. 19; col. 5, ln. 49-56; col. 6, ln. 61-64).

Art Unit: 2629

As to Claims 2 and 6, CHIANG teaches/suggests wherein the shaft (30) further comprises at least one handle (38) connected to the display panel (50) for a user to move the shaft (CHIANG: col. 4, ln. 1-19).

As to Claims 3 and 7, CHIANG teaches/suggests wherein the shaft (30) further comprises: at least one button (40) located on the handle (38) for the user to press; and a button circuit outputting a corresponding button signal while the button is pressed, and the mainframe receiving the button signal and performing a relative operation (see Figures 8a,b) (CHIANG: col. 4, ln. 1-19; col. 7, ln. 4-8).

As to Claims 4 and 8, CHIANG teaches/suggests wherein the display panel (50) is a liquid crystal display (CHIANG: col. 4, ln. 15-17).
